As part of the OMII-UK [ENGAGE](#) initiative, a new project has just been started at the [OeRC](#), lead by

[Dr. David Wallom](#)

and myself. It aims to offer the output of the eSAD project, and particularly the image processing tools we develop, to a wider research community of Classicists through the use of an easy-to-use web-based Virtual Research Environment. As such it bridges the eSAD project and the

[VRE-SDM](#)

project. While the front-end user interface will remain an easy to use application, it will be able to exploit the

[National Grid Services](#)

resources to carry out the advanced computations in the background.
